

## SDL-5N3EAG-A

### Features

- High Luminous Output Pure-Green LED Lamp
- Chip Technology — InGaN
- Standard 5mm (T-1 3/4) Water Clear Packages
- Viewing Angle **30** Degree (Reference)

### Specifications

#### Absolute Maximum Ratings

Item	Symbol	Absolute Maximum Rating	Unit
DC Forward Current	$I_F$	30	mA
Peak Pulsed Forward Current ※	$I_{FP}$	100	mA
Reverse Voltage	$V_R$	5	V
Power Dissipation	$P_d$	72	mW
Operating Temperature	$T_{opr}$	-30 ~ +85	°C
Storage Temperature	$T_{stg}$	-40 ~ +100	°C
Solder Dipping Temperature	$T_{sld}$	260°C for 5 sec	

※  $I_{FP}$  = Pulse Width  $\leq$  10 ms, Duty Ratio  $\leq$  1/10

#### Electrical / Optical Characteristics

$T_a = 25^\circ\text{C}$

Item	Symbol	Condition	Min	Typ	Max	Unit
Forward Voltage	$V_F$	$I_F=20\text{mA}$	2.7	2.9	3.4	V
Reverse Current	$I_R$	$V_R=5\text{V}$			10	$\mu\text{A}$
Luminous Intensity	$I_V$	$I_F=20\text{mA}$	9300	19000	27300	mcd
Dominant Wavelength	$\lambda_d$	$I_F=20\text{mA}$	515	525	535	nm
Peak Wavelength	$\lambda_p$	$I_F=20\text{mA}$		518		nm
Spectral Half Width	$\Delta \lambda_{1/2}$	$I_F=20\text{mA}$		30		nm

Electrostatic Sensitive Devices

## Luminous Intensity Bin Table

**IF=20mA**

Rank name	Min (mcd)	Max (mcd)
<b>Y</b>	<b>9300</b>	<b>12000</b>
<b>Z</b>	<b>12000</b>	<b>15700</b>
<b>ZA</b>	<b>15700</b>	<b>21000</b>
<b>ZB</b>	<b>21000</b>	<b>27300</b>

※ Tolerance for each bin limit is  $\pm 15\%$

## Color Bin Table

**IF=20mA**

Rank name	Min (nm)	Max (nm)
<b>1</b>	<b>515</b>	<b>520</b>
<b>2</b>	<b>520</b>	<b>525</b>
<b>3</b>	<b>525</b>	<b>530</b>
<b>4</b>	<b>530</b>	<b>535</b>

※ Tolerance for each bin limit is  $\pm 1\text{nm}$

### Note

1. One delivery will include several color ranks and  $I_v$  ranks of products.  
The quantity-ratio of the different ranks is decided by Sander.
2. Bin Name typed on the Label: IV RANK + Color Rank.  
For Example, **BIN Z2 Means IV: 12000~15700mcd and Color: 520nm~525nm**
3. Static Electricity or Surge Voltage damages the LEDs.  
It is recommended to use a wrist band or Anti-Electrostatic glove when handling the LEDs.
4. Sander has the right to update the information without notice.  
Please double confirm the Spec details before placing an order.

# Outline Dimensions

## Lamps without Standoffs

Item	Materials
Resin	Epoxy Resin
Lead Frame	Ag Plating on SPCC

**Note**

1. All Dimensions are in Millimeters

# Electrical-Optical Characteristics

Forward Current vs. Forward Voltage

Relative Intensity vs. Forward Current

Forward Current vs. Ambient Temperature

Relative Intensity vs. Wavelength

## Soldering Conditions - Lamp Type LED

- Solder the LED no closer than 3mm from the base of the epoxy bulb. Soldering beyond the base of the tie bar is recommended
- Recommended soldering conditions:

<b>Dip Soldering</b>	
<b>Pre-Heat</b>	100°C Max.
<b>Pre-Heat Time</b>	60 sec. Max.
<b>Solder Bath Temperature</b>	260°C Max.
<b>Dipping Time</b>	5 sec. Max.
<b>Dipping Position</b>	No lower than 3mm from the base of the epoxy bulb.

<b>Hand Soldering</b>		
	<b>30 Series</b>	<b>Others (Including Lead-Free Solder)</b>
<b>Temperature</b>	300°C Max.	350°C Max.
<b>Soldering time</b>	3 sec. Max.	3 sec. Max.
<b>Position</b>	No closer than 3mm from the base of the epoxy bulb.	No closer than 3mm from the base of the epoxy bulb.

- Do not apply any stress to the lead, particularly when heated.
- The LEDs must not be repositioned after soldering.
- After soldering the LEDs, the epoxy bulb should be protected from mechanical shock or vibration until the LEDs return to room temperature.
- Direct soldering onto a PC board should be avoided. Mechanical stress to the resin may be caused by the PC board warping or from the clinching and cutting of the leadframes. When it is absolutely necessary, the LEDs may be mounted in this fashion, but the User will assume responsibility for any problems. Direct soldering should only be done after testing has confirmed that no damage, such as wire bond failure or resin deterioration, will occur. Sander's LEDs should not be soldered directly to double sided PC boards because the heat will deteriorate the epoxy resin.
- When it is necessary to clamp the LEDs to prevent soldering failure, it is important to minimize the mechanical stress on the LEDs.
- Cut the LED leadframes at room temperature. Cutting the leadframes at high temperatures may cause LED failure.
